space-between

Note that visually the spaces aren't equal, since all the items have equal space on both sides. The first item will have one unit of space against the container edge, but two units of space between the next item because that next item has its own spacing that applies.

The diagram consists of three light gray rounded rectangular boxes arranged horizontally on a dark blue background. The central box is wider than the two flanking boxes. The text 'space-evenly' is written in red inside the central box.

space-evenly

items are distributed so that the spacing between any two items (and the space to the edges) is equal.
